

GWC HNRP dashboard — page 1 and page 2 mock-ups for review

Three concepts, drawn against **real 2023–2026 figures** pulled from the four published dashboards. This is the paper-and-pencil stage David asked for: comment on **layout and choice of measures**, not colour — GWC styling comes after we agree a concept. Page 3 (localization) is not covered here.

A · PAGE 1 Continuity today's layout, decongested, plus a prioritized block

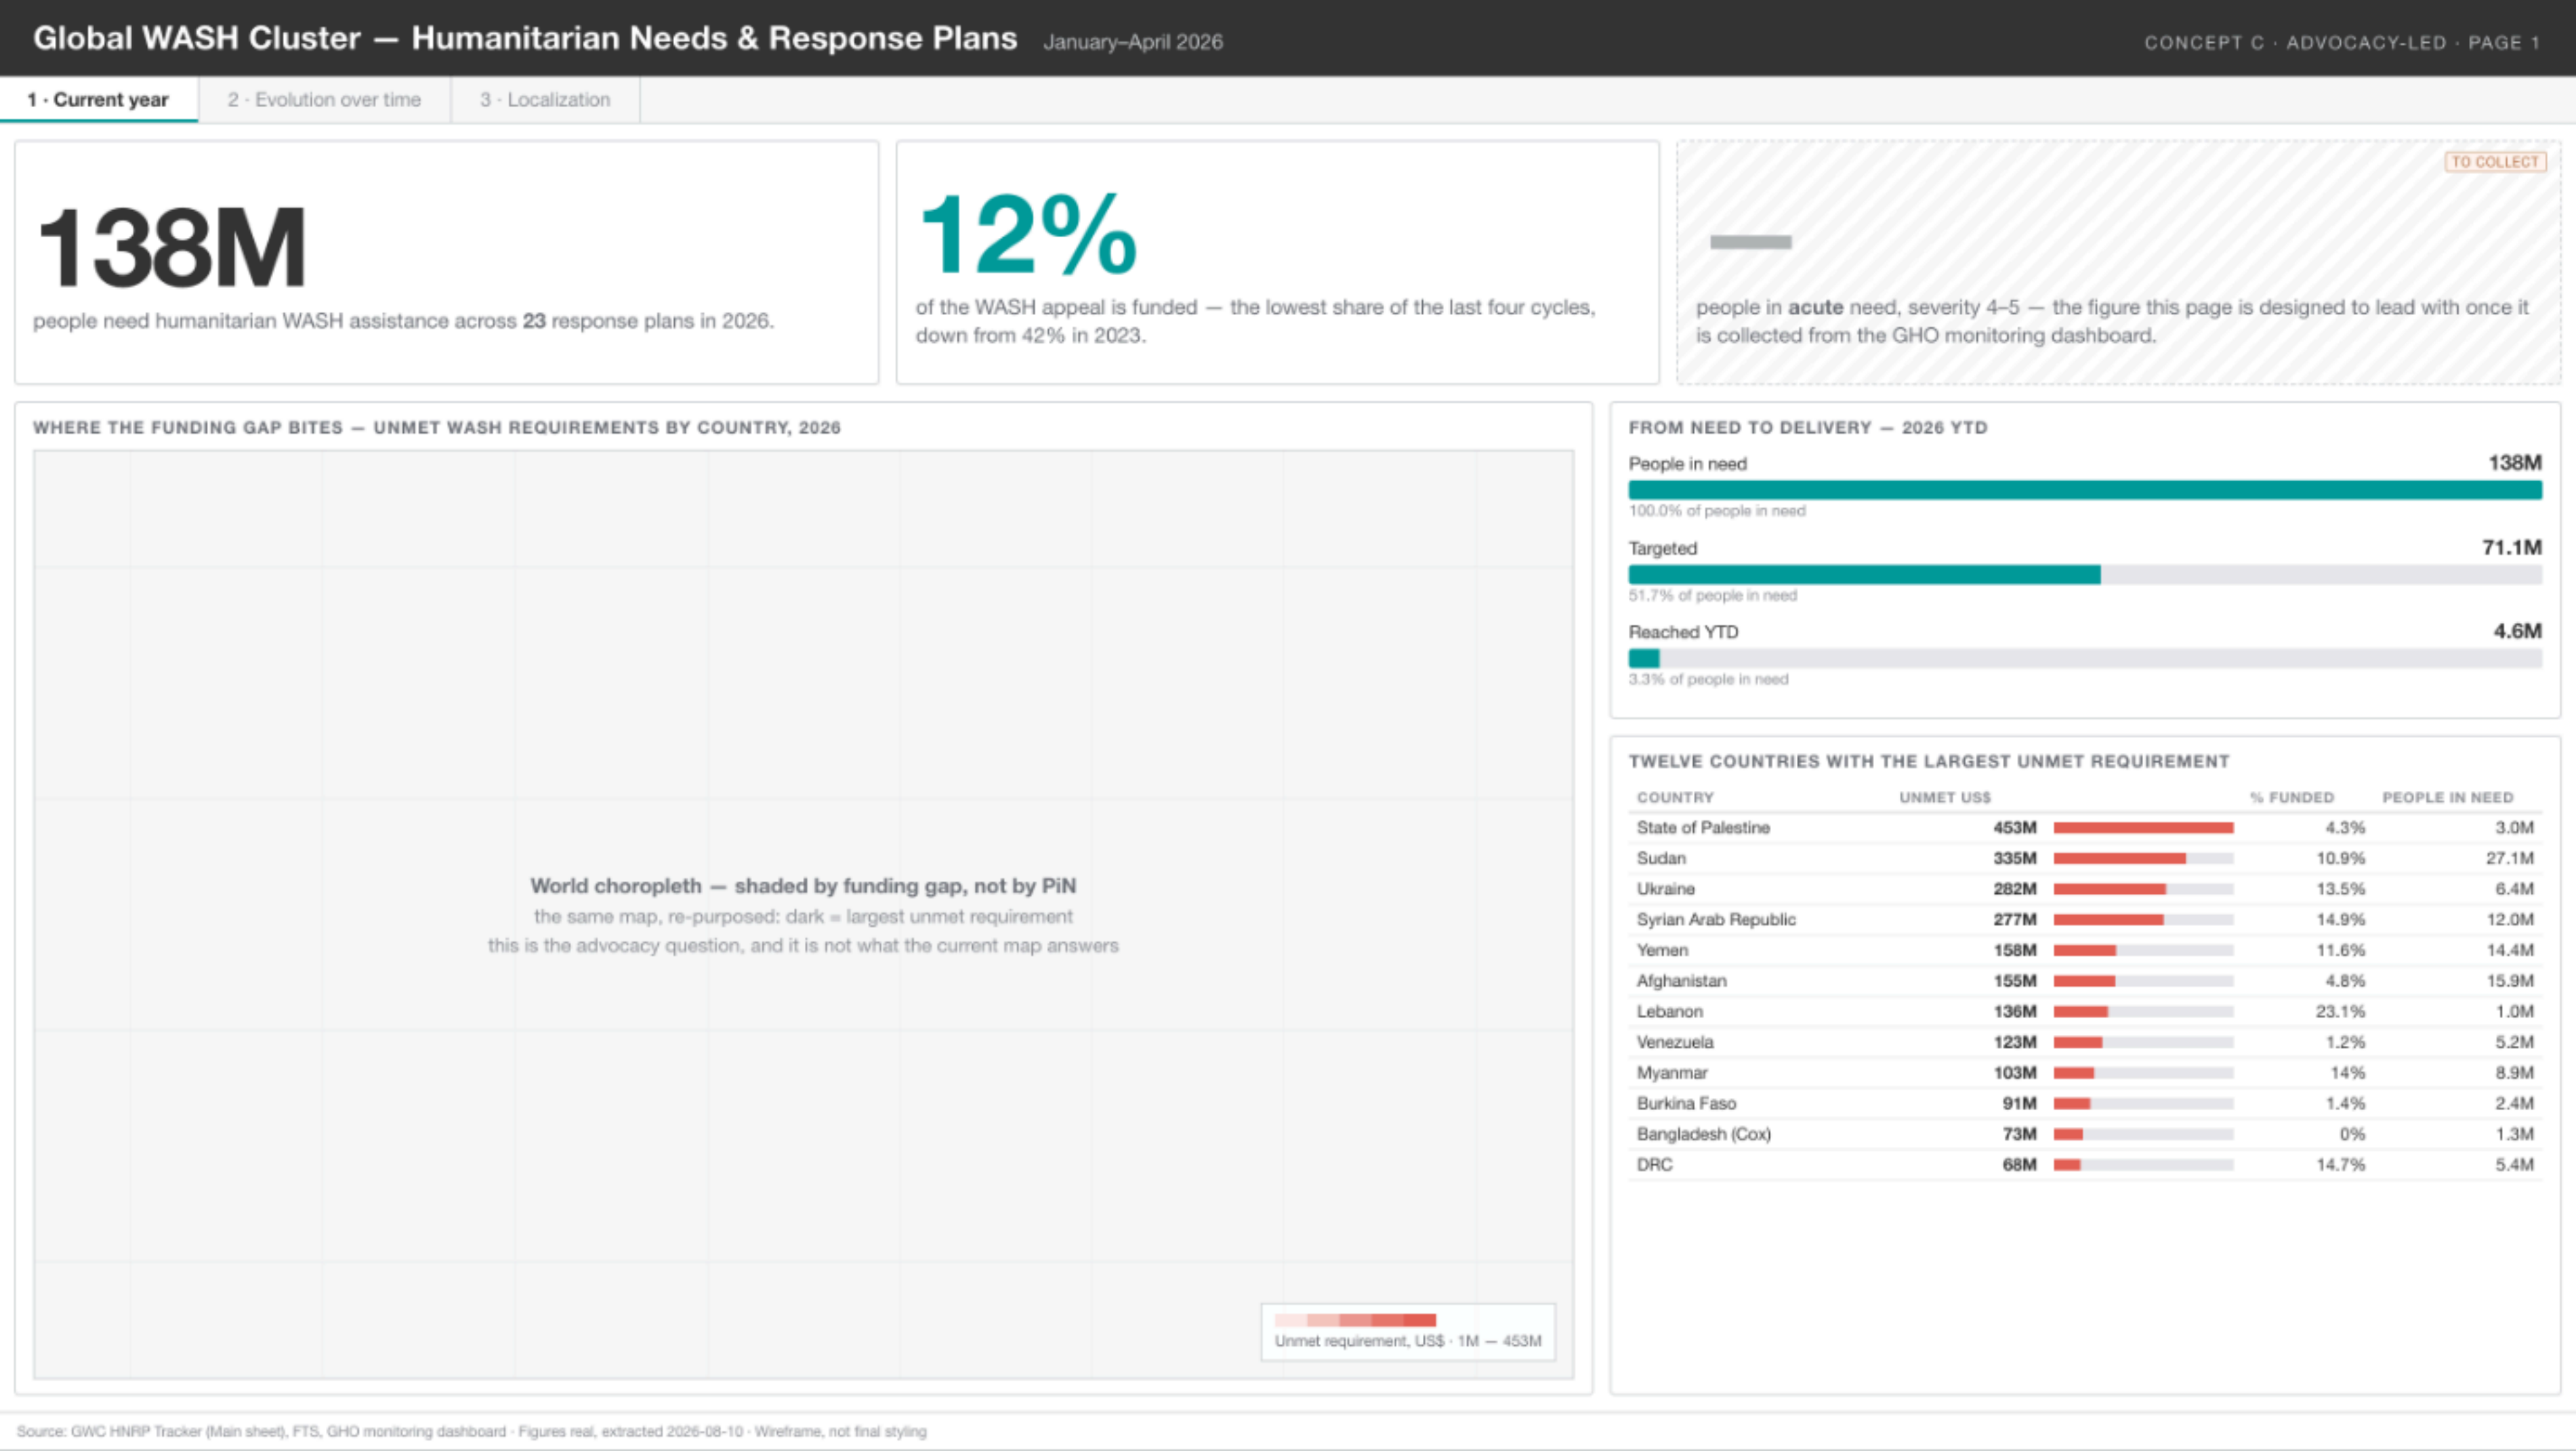

B · PAGE 1 Coverage funnel KPI ribbon with sparklines, map, analytic country table

Source: GWC HNRP Tracker (Main sheet), FTS, GHO monitoring dashboard · Figures real, extracted 2025-08-10 · Wireframe, not final styling

C · PAGE 1 Advocacy-led hero figures, map shaded by funding gap

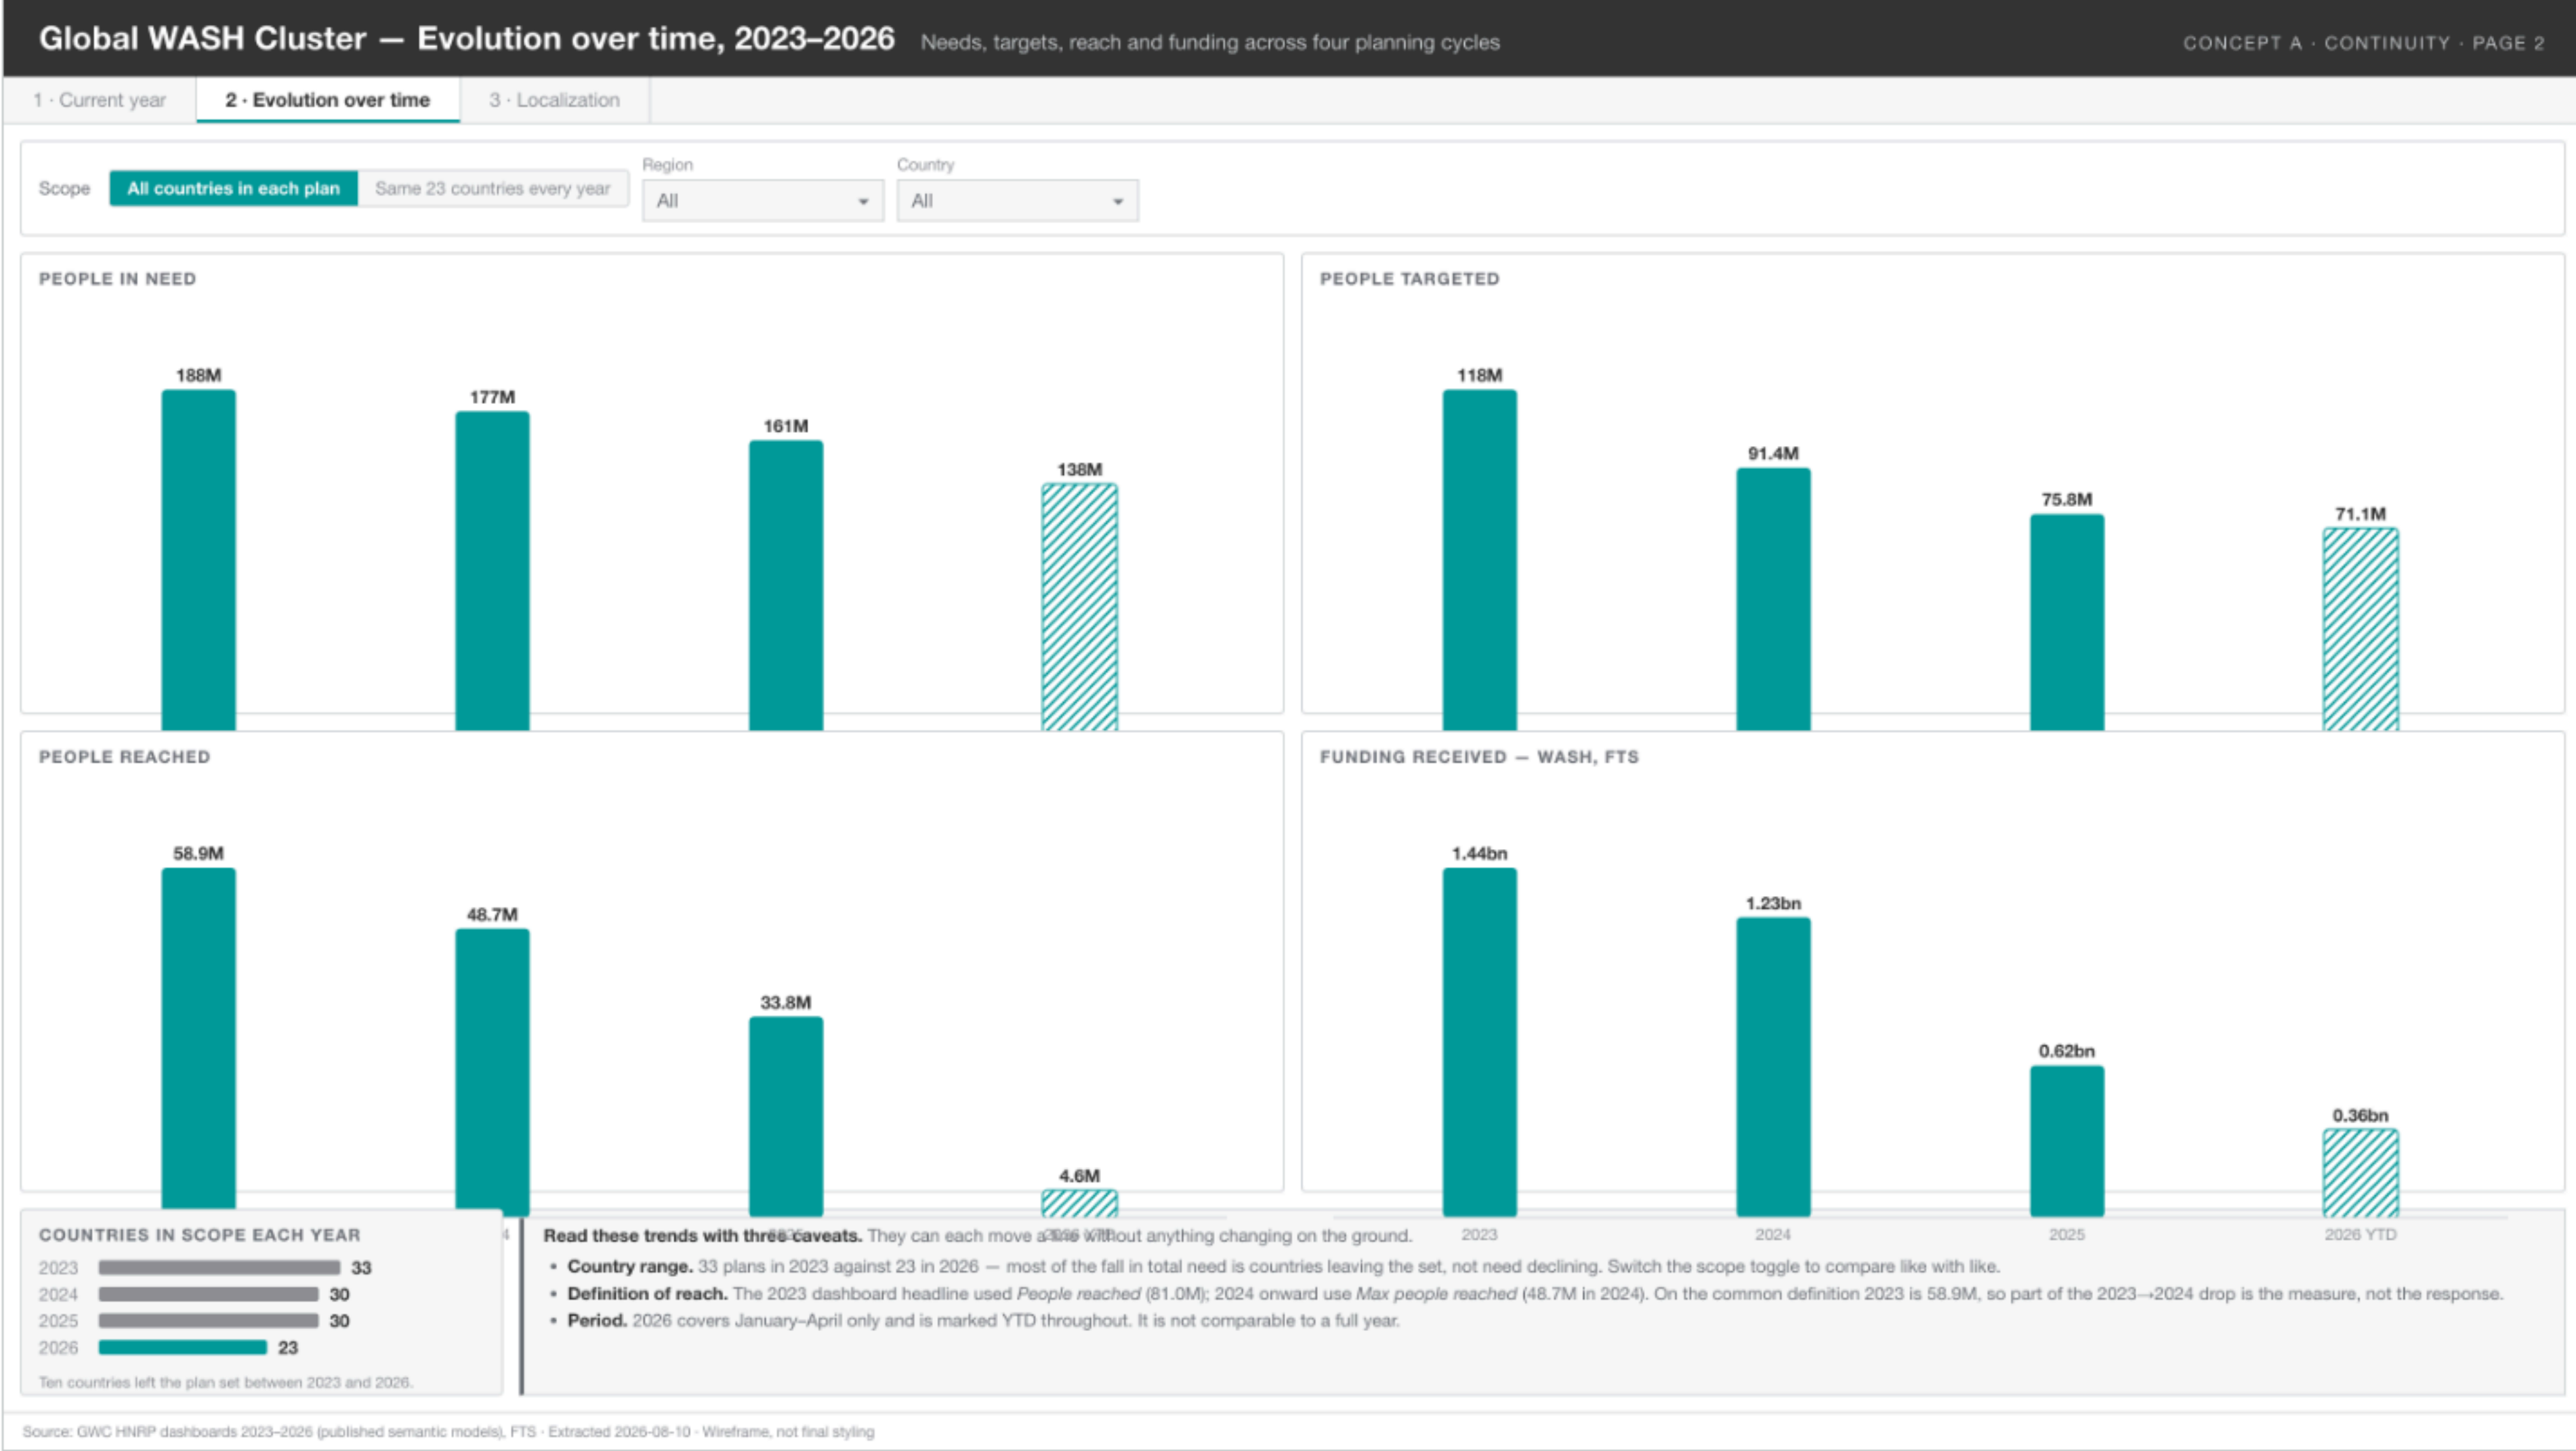

Three things the data says, whichever concept we pick.

- The 27% fall in people in need is mostly composition. Across the 23 countries that appealed in every cycle, need went 143.6M → 137.5M (–4%). Ten countries left the plan set. Both scopes are on every page-2 concept via a toggle.
- The funding collapse is real. Received fell ~70% on both scopes; the share funded went 42% → 12%. This is the defensible advocacy line.
- The reach measure changed after 2023. The 2023 headline used *People reached* (81.0M); 2024 onward use *Max people reached*. On the common basis 2023 is 58.9M, so part of the 2023→2024 drop is definitional.

Five data issues to decide on before we build

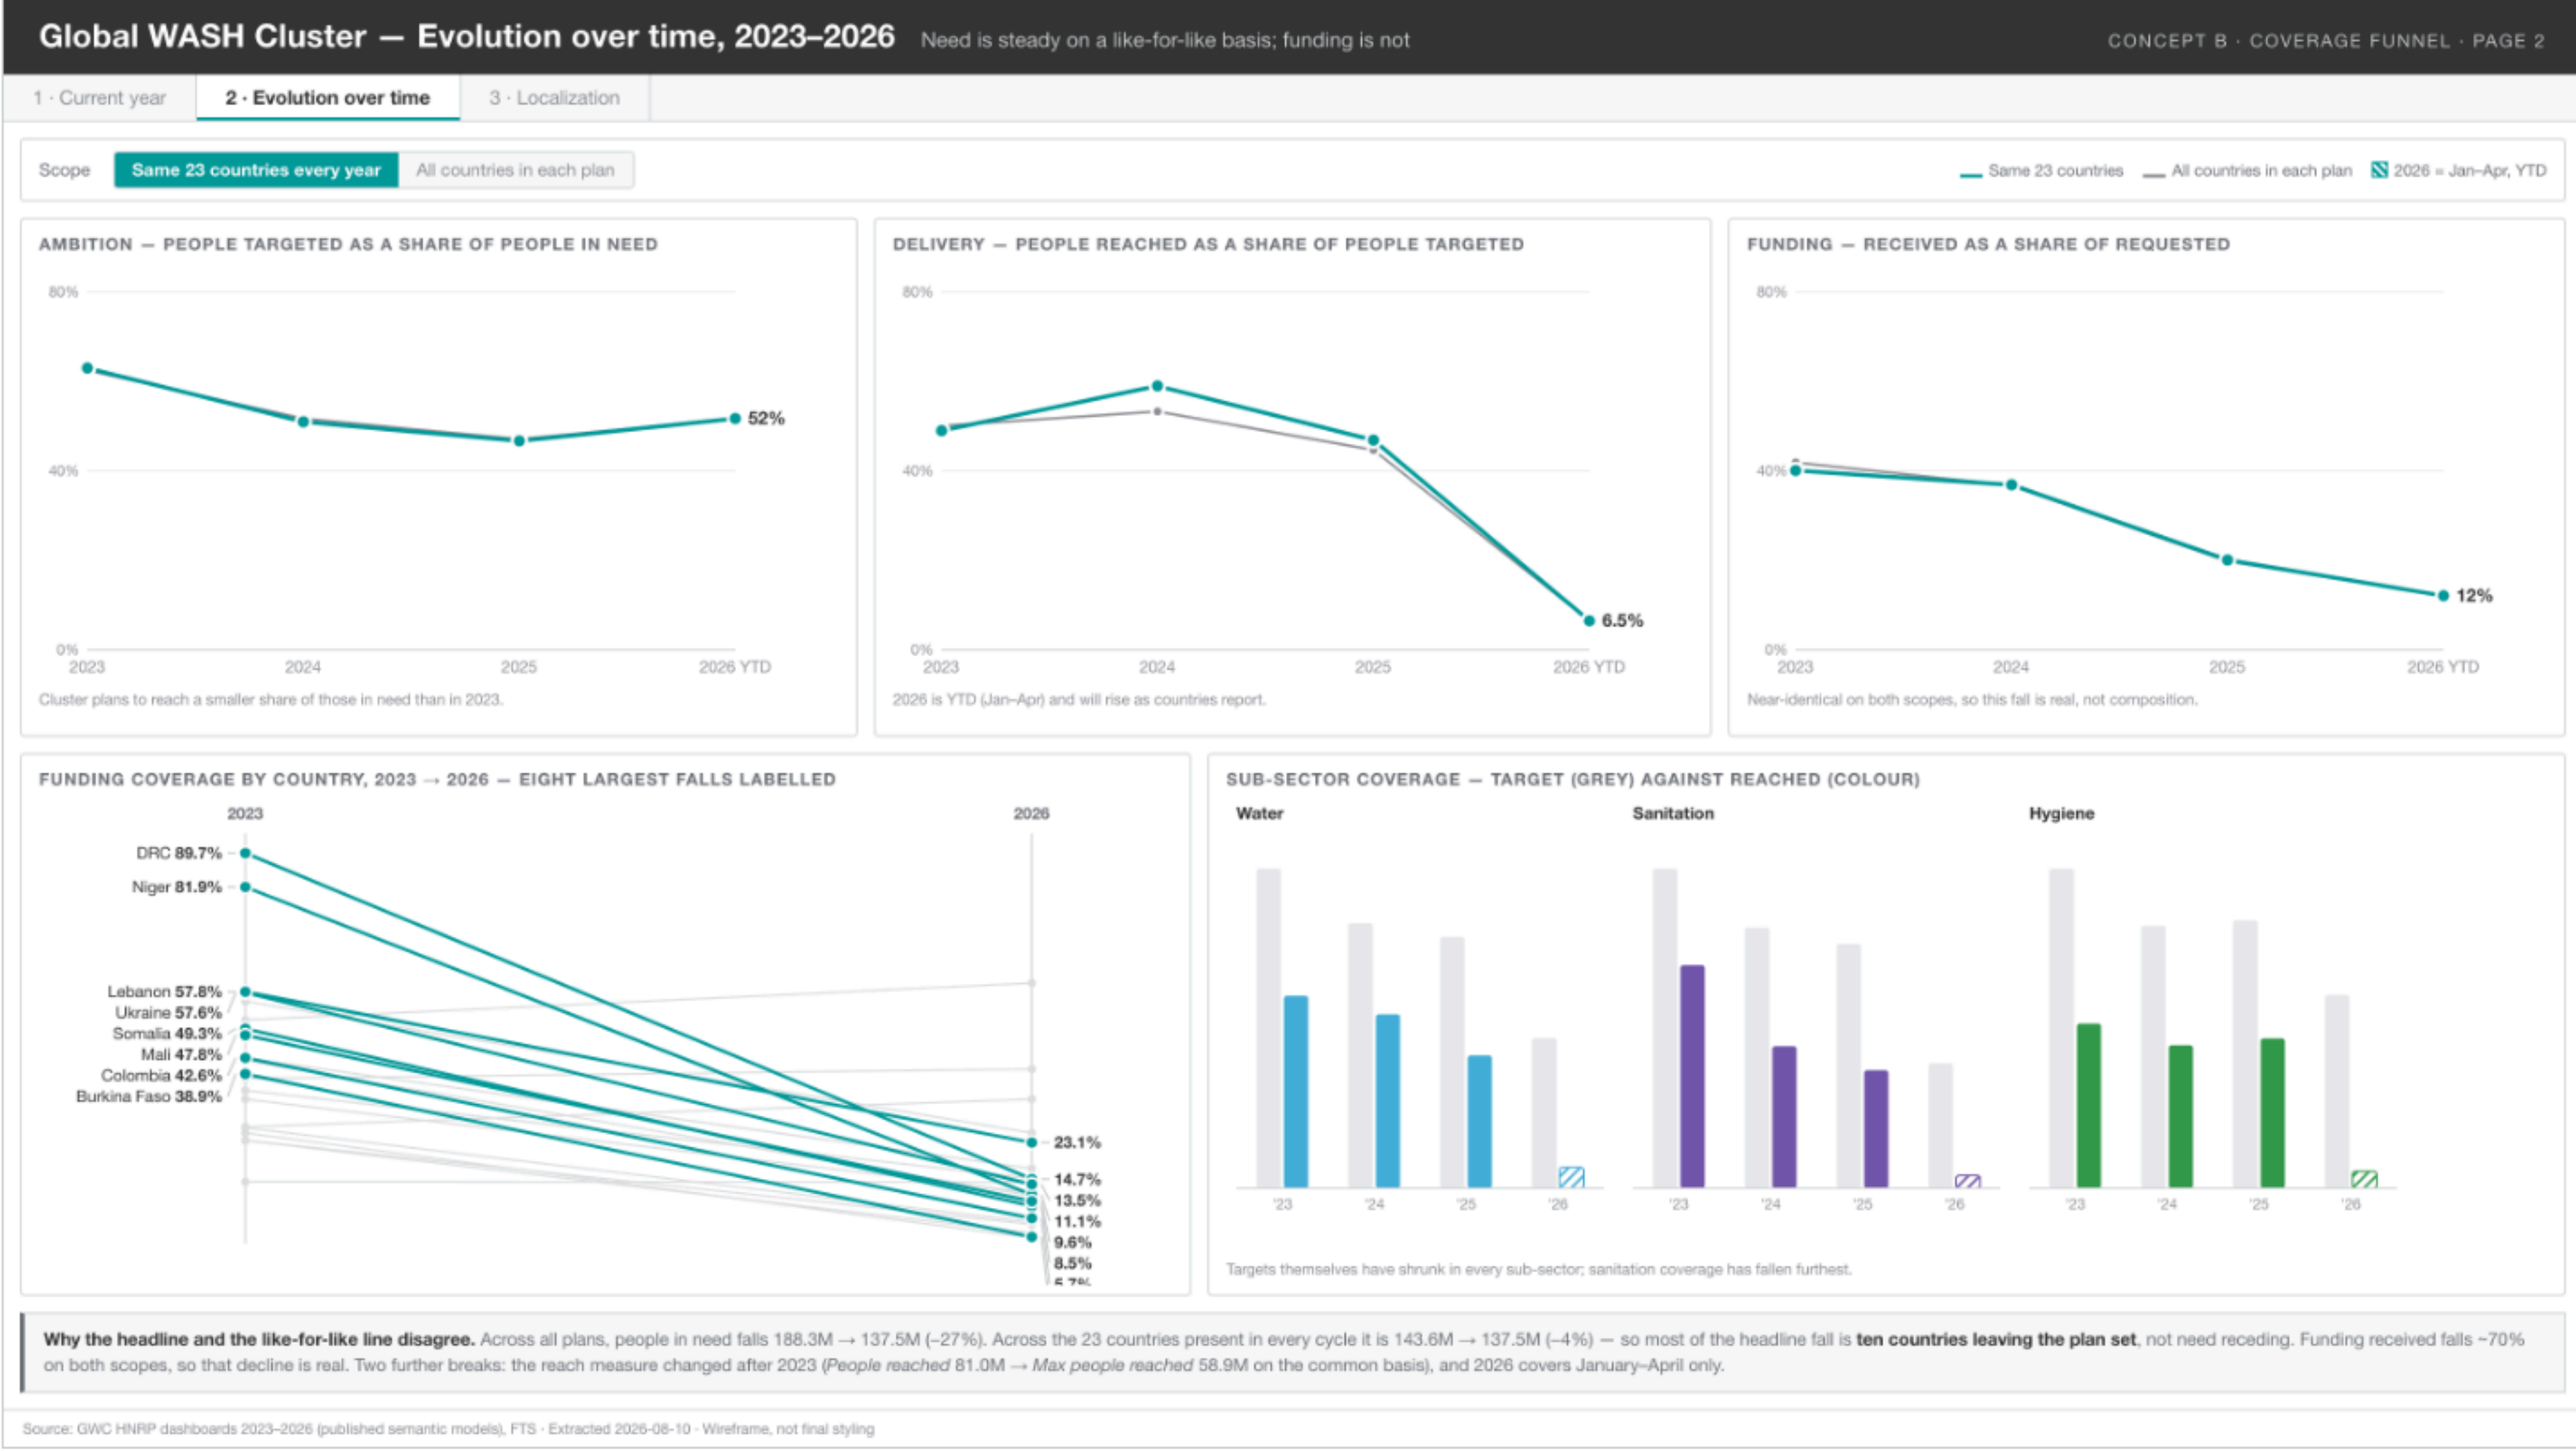

- Region column is scrambled in the 2026 tracker from row 11 down — Ukraine reads ESARO, Venezuela MENA, Somalia WCARO. The live region slicer is therefore mis-grouping countries.
- Mali's country code cell contains 41053442 (its funding-requested figure) instead of MLI. Lebanon is coded LEB, Malawi MLW — neither is a valid ISO3, which breaks year-on-year joins.
- Max people reached returns 0 for Chad, CAR, Somalia and Yemen although each has a reported WASH reach figure — this is why 2026 shows "N/A".
- The hygiene progress bar on the live 2026 dashboard (52.3%) cannot be reproduced from the tracker, which gives 8.7%. Water (13.9%) and sanitation (10.2%) reproduce exactly.
- Prioritized PIN severity 4–5, prioritized target and prioritized funding are not collected. They sit on the GHO monitoring dashboard and are shown as "to collect" placeholders.
