

GWC HNRP dashboard — page 1 and page 2 mock-ups

Concept B has been revised following review and now runs to three screens; A and C are unchanged so the comparison still stands. All drawn against **real 2023–2026 figures** pulled from the four published dashboards. Comment on **layout and choice of measures**, not colour — GWC styling comes after we agree a concept. Page 3 (localization) is not covered here.

B · PAGE 1 — REVISED Coverage funnel story line, KPI ribbon, map, analytic country table

B · PAGE 2 — NEW **Single-country view** focus the whole page on a single response plan

A • PAGE 1 **Continuity** today's layout, decongested, plus a prioritized block

C · PAGE 1 **Advocacy-led** hero figures, map shaded by funding gap

B · PAGE 2 — REVISED **Global view** three ratios, country slope chart, sub-sector facets

WHAT CHANGED IN B

1. **Country focus.** Page 2 gains a Global / Single country sub-tab and country slicers. The third screen shows the country state, using Sudan. In Power BI this is one bookmark on the same page, not a new page.
2. **A story line on every page**, stating the finding rather than repeating the title.
3. **The 23-country toggle is promoted** into the story line, with its consequence spelled out — it is the answer to the 30→23 problem, so it should not be a control in the corner.
4. **WASH share of the total appeal** added as a flagged "to collect" line on both pages. Needs appeal-level totals from FTS.
5. **Distribution fixes.** The KPI ribbon no longer spends two of six tiles on empty placeholders; the map gained a measure selector so it can shade by a rate rather than a count; the country table no longer clips its last row.

A · PAGE 2 **Continuity** four trend columns, caveat bandC · PAGE 2 **Advocacy-led** one indexed chart, composition of each year's total
